Yosprala[®]
(aspirin and omeprazole)

For healthcare professionals - www.yospralahcp.com

Indication and Usage

Yosprala, a combination of aspirin and omeprazole, is indicated for patients who require aspirin for secondary prevention of cardiovascular and cerebrovascular events and who are at risk of developing aspirin-associated gastric ulcers.

The aspirin component of Yosprala is indicated for:

- Reducing the combined risk of death and nonfatal stroke in patients who have had ischemic stroke or transient ischemia of the brain due to fibrin platelet emboli
- Reducing the combined risk of death and nonfatal MI in patients with a previous MI or unstable angina pectoris
- Reducing the combined risk of MI and sudden death in patients with chronic stable angina pectoris
- Use in patients who have undergone revascularization procedures (Coronary Artery Bypass Graft [CABG] or Percutaneous Transluminal Coronary Angioplasty [PTCA]) when there is a pre-existing condition for which aspirin is already indicated

The omeprazole component of Yosprala is indicated for decreasing the risk of developing aspirin-associated gastric ulcers in patients at risk for developing aspirin-associated gastric ulcers due to age (≥ 55) or documented history of gastric ulcers.

Limitations of Use:

- Yosprala contains a delayed-release formulation of aspirin and it is not for use as the initial dose of aspirin therapy during onset of acute coronary syndrome, acute myocardial infarction, or before percutaneous coronary intervention (PCI), for which immediate-release aspirin therapy is appropriate
- Yosprala has not been shown to reduce the risk of gastrointestinal bleeding due to aspirin
- Yosprala is not interchangeable with the individual components of aspirin and omeprazole

Important Safety Information about Yosprala

Active Ingredients

Yosprala (aspirin and omeprazole) is a combination of aspirin, an anti-platelet agent, and omeprazole, a proton pump inhibitor (PPI).

Uses

Yosprala is a prescription medicine used: in people who have had heart problems or strokes caused by blood clots, to help reduce their risk of further heart problems or strokes, and who are at risk of developing stomach ulcers with aspirin use

Yosprala should not be used to treat sudden signs and symptoms of a heart attack or stroke. Yosprala should only be used as directed by your doctor to help reduce the risk of further heart problems or strokes.

You should not take an aspirin tablet and an omeprazole tablet together instead of taking Yosprala, because they will not work the same way.

You should take Yosprala exactly as prescribed.

Yosprala may help reduce the risk of stomach ulcers from aspirin use, but you could still have bleeding and stomach or intestine ulcers, or other serious stomach or intestine problems. Talk with your doctor if you experience any of these problems.

Do not use Yosprala if you:

- are allergic to aspirin, omeprazole, or any of the ingredients in Yosprala
- are allergic to any non-steroidal anti-inflammatory drug (NSAID)
- have a medical condition with severe shortness of breath, chest tightness or pain, coughing or wheezing (asthma), sneezing, runny nose or itchy nose (rhinitis), and growths inside of your nose or sinuses (nasal polyps)
- are taking a medicine that contains rilpivirine (EDURANT®, COMPLERA®, ODEFSEY®) used to treat HIV-1 (Human Immunodeficiency Virus)
- Do not give Yosprala to a child who has a suspected viral infection, even if they do not have a fever. There is a risk of Reye's syndrome with Yosprala because it contains aspirin.

How should I take Yosprala?

- Take Yosprala exactly as prescribed by your doctor
- Do not change your dose or stop Yosprala without talking to your doctor
- Take Yosprala 1 time each day
- Take Yosprala at least 1 hour before a meal
- Swallow Yosprala tablets whole with liquid. Do not split, chew, crush, or dissolve Yosprala
- If you miss a dose of Yosprala, take it as soon as you remember. If it is almost time for your next dose, do not take the missed dose. Take the next dose at your regular time. Do not take 2 doses at the same time unless your doctor tells you to
- If you take too much Yosprala, call your doctor or your poison control center at 1-800-222-1222 right away or go to the nearest emergency room.

The most common side effects of Yosprala include: indigestion or heartburn and stomach-area pain, nausea, diarrhea, growths (polyps) in your stomach, and chest pain behind the breastbone, for example, with eating.

Before starting YOSPRALA®, tell your health care provider if you have history of ulcer disease or esophagus, stomach, intestine bleeding, liver or kidney problems, high blood pressure, heart problems, bleeding problems, asthma, or are pregnant, trying to become pregnant, or breast feeding. Also tell your health care provider about all of the medicines you take, including prescription or over-the-counter medicines, vitamins, or herbal supplements. Do not start taking new medicines without talking to your health care provider first.

You are encouraged to report negative side effect of prescription drugs to the FDA. Visit www.fda.gov/medwatch, or call 1-800-FDA-1088. You may also contact the Innovida Pharmaceutique Corporation at 1-888-918-0980 or visit innovidarx.com.
